Profile

An eager programmer driven by working with diverse programming languages and expanding my horizons across software engineering. Currently, I have immersed myself in Full-Stack Development, combining solid algorithmic foundations with building complete web applications.

Education

International Hellenic University (IHU)

Integrated Master Degree in Computer Science and Electronic Systems Engineering (In Progress)

Thessaloniki, Greece

Oct. 2021 – Present

Projects

AI Python Tutor (Thesis Project - In Progress)

[Live](#)

- Designed and built a multi-agent pipeline (Mentor, Debugger, Assessor) using LangGraph for personalized Python tutoring.
- Combined deterministic code analysis (AST parsing) with LLM-based reasoning to feed structured data into the models, reducing hallucinations.
- Implemented adaptive learning state logic (advance/repeat/support) dynamically responding to student evaluation history.
- Developed a full-stack platform featuring interactive Monaco-based code editor, automated chapter exercises, and session logging tracked via LangSmith.
- Tech Stack:** Python, FastAPI, LangGraph, LangChain, React, PostgreSQL (Neon), LangSmith, Vercel, Render.

Gamified Calendar Application

[Live](#)

- Developed a full-stack, RPG-inspired productivity calendar with a complete gamification engine (XP/leveling, streaks, daily quests, 12 achievements with real usage-based statistics) built on FastAPI + PostgreSQL.
- Implemented JWT-based authentication with protected API endpoints, bcrypt password hashing, and rate limiting.
- Built dynamic drag-and-drop scheduling (HTML5 API) with sub-hour time-boxing and recurring task series.
- Containerized the full stack with Docker and deployed it (Railway) with a CI-friendly build pipeline.
- Tech Stack:** React, Tailwind CSS, Python, FastAPI, PostgreSQL, SQLAlchemy, Pydantic, PyJWT, Bcrypt, Docker.

My Personalized Online CV

[Live](#)

- Built a clean personal portfolio web app using React.js featuring dark/light mode toggles and global state management.
- Implemented dynamic bilingual support (Greek & English) and a downloadable PDF resume, deployed on Vercel.
- Tech Stack:** React.js, CSS3, Vercel.

Online Backgammon Game (Team Project)

[Live](#)

- Collaborated in a team environment to engineer a full-stack online board game (Plakoto variant) using standard RESTful architecture.
- Built server-side game logic in PHP managing complex calculations including board configurations, dice algorithms, and bear-off mechanics.
- Designed a responsive UI communicating asynchronously with the central router via JSON payloads and HTTP Token authentication.
- Tech Stack:** PHP, MySQL, JavaScript, HTML5, CSS3, REST APIs.

Certifications & Languages

Languages: Greek (Native), English (Lower Certificate ECCE)

Computer Skills: IT Skills Certification (Word Processing, Spreadsheets, Databases, Presentation, Internet Services)
